To,

Medhansh Kapoor
India

Subject: Internship - Software Development Engineer

Dear Medhansh,

We are pleased to offer you the internship Software Development Engineer at our company with full stack responsibilities till July 31 2026. Your start date will be May 18 2026. The stipend for this position is Rs20K per month paid by last week of the month.

Your primary responsibilities will include, but are not limited to, the following:

1. Developing and maintaining web applications using full stack technologies including AWS, Salesforce, Python, Javascript, and other related technologies.
2. Participating in all phases of the software development lifecycle, including planning, designing, coding, testing, and deployment.
3. Collaborating with cross-functional teams to define, design, and ship new features.
4. Troubleshooting, debugging, and upgrading existing software.
5. Ensuring the performance, quality, and responsiveness of applications.
6. Participating in PSP (Personal Software Process) activities to track and improve personal productivity and quality.
7. Writing clean, scalable, and well-documented code.
8. Keeping up to date with the latest industry trends and technologies to ensure we are always using the best tools and techniques available.

Key Process Guidelines:

Our development process is aligned with best practices in software engineering to ensure high-quality deliverables. Here are some key guidelines we follow, incorporating SEI Personal Software Process (PSP) activities:

1. Code Review and Collaboration:
 - Conduct regular code reviews to maintain code quality and share knowledge among team members.
 - Use tools like Git for version control and collaboration.
2. Continuous Integration and Deployment (CI/CD):

-
- Implement CI/CD pipelines to automate testing and deployment processes.
 - Ensure that every code change is automatically tested and deployed to prevent integration issues.
3. Agile Development Methodologies:
- Follow Agile principles to enhance flexibility and responsiveness to changing requirements.
 - Conduct regular sprint planning, daily stand-ups, and retrospectives to ensure continuous improvement.
4. SEI Personal Software Process (PSP) Activities:
- Planning: Define project goals, create a detailed plan, and estimate time and resources needed.
 - High-Level Design: Develop a high-level design of the system architecture and components.
 - High-Level Design Review: Review the high-level design to identify potential issues and areas for improvement.
 - Development: Implement the design using best coding practices and ensure code is well-documented.
 - Code Review: Perform thorough code reviews to ensure code quality and adherence to design specifications.
 - Test Development: Develop and execute test plans to verify the functionality and performance of the system.
 - Postmortem Analysis: Conduct a postmortem analysis to evaluate the project's success, identify areas for improvement, and document lessons learned.
